

Chestnut Wood Poles

vineyards, fences

Chestnut wood posts are widely employed in agriculture. Thanks to a high tannin concentration, the chestnut post does not need any particular treatment to prolong its lifetime. The post is strong enough to assure the plantation's stability, furthermore it does not bring damage to machineries during pruning or grape harvesting process.

Technical Data			
Length	Diameter	Head	Pieces/Pallet
250 cm	8/10 cm	si	125
275 cm	8/10 cm	si	125

Pine Wood Poles

vineyards, fences

Treated scotch pine-tree posts are made of mature wood, with thick and strong fiber. They have a very low environmental impact and good flexibility; these wooden posts have a short life span if compared to the vineyard's life.
